

XM Radio provides me with some of the best entertainment and data around. It's not fair that the National Association of Broadcasters is trying to limit the full potential of Satellite Radio. Honestly, they should not have a say at all in what I listen to. I pay for the service, and I get everything they don't offer. Their traffic and weather service is superior to what is offered by my local AM stations. If they want to compete, change the format and offer a better service. The variety of music I hear is found nowhere on the AM or FM dials. This attempt by the NAB to limit MY access to this information is appalling and totally un-American. Please reject the NAB's petition 04-160 and tell the NAB that they can't scare my back to listening to their crappy radio stations. I'd rather pay my \$10 a month for the rest of my life than listen to the garbage that's currently broadcast on the local AM/FM stations. XM radio is what keeps me sane on my 1+ hour commute to work and my 2.5 hour commute home every day. Limiting my options through lobbying is wrong. Thank you for your time.
